Reason for Allowance

1. Regarding claims 1-23, and 31-53, the prior art fails to teach or suggest a method of distributing a message from a source to one or more hosts in a communications network that comprises one or more multicast capable routers, the method comprises the steps in the first multicast capable router, using the first table to identify N1 hosts and their respective sub-branches, and in the first multicast capable router, distributing the message to each of the identified sub-branches along with a second value, N2, that specifies how many hosts within the sub-branch the message is to be distributed to, in combination with other limitations, as specified in the independent claims 1, 23, and 52-53.

Regarding claims 24, 26-30, 54, and 56-60, the prior art fails to teach or suggest a method of determining how many hosts are members of a sub-branch that is connected to a local router in a digital communications network, the method comprises a step in which each multicast capable router in the sub-branch responds to receipt of the membership query message by determining a delay time, and sending a membership information response after the delay time has elapsed only if each multicast capable router in the sub-branch has not detected a membership information response being sent by a different multicast capable router in the sub-branch, in combination with other limitations, as specified in the independent claims 24, and 54.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
